## PROJECTS

---

**“COVID-19 Analysis”:** Analysis of trends, volatility and volatility deltas of COVID-19 case and vaccination numbers vs. macroeconomic indicators

- Performed analysis of and plotted data using Python libraries Pandas and Matplotlib respectively.

**“Codenames”:** A game where two teams compete by using one-word clues that point to multiple words on a board.

- Built ORM in SQLAlchemy for SQLite3 database. Seeded the database and wrote business logic. Stack includes Flask and React.

**“Education Collaboration”:** Initiative to spur domestic trade-skill education in response to rising labor costs abroad.

- Led group to win award in CUNY-wide Entrepreneurial Concept Competition.
